Partial Credit Items	Text	3,10,12	160	For each test any questions that allow partial credit, list the question numbers separated by commas. For these partial credit questions: - The Correct value in the item metadata must be the maximum points possible for that question. - The Item Response value should be the partial credit points earned by the student for that question, not exceeding the maximum points set in the Correct value. This allows the system to properly score questions with partial credits, by setting the maximum possible points in Correct, and the actual partial points earned in Item Response.
